SECURITY STATE : A REALITY CHECK

Security decreases as attack surface increases, so the exponential growth of business data in an organization makes protecting data more complicated than ever before. We live in an age dominated by technological improvements feeding on our desire to be evermore connected. As we become more connected there is an expectation that access to systems and data will be available from anywhere anytime. However, it is this demand for real time access from any location that dramatically increases our risk profile and makes control over corporate data as one of the most challenging and vital cyber security considerations.

Security is always in the headlines due to increasing global data breaches and exploitations. The Common reasons for the current state of security are:

- Organisations are not able to keep up pace with the volume, velocity and variety of threats that are emerging every day.
- Each industry faces intense pressure to bring innovation to the marketplace, connect with customers, improve operations, and collaborate with partners and suppliers — all of which can present new risks to the enterprise.
- Organizations must guard against rapidly changing threats, ranging from traditional malware to sophisticated, state-sponsored attacks.
- Mobile apps, third-party cloud-based services and BYOD also put key business initiatives in direct conflict with cybersecurity policies. Organizations must quickly respond to these conflicts, assess potential threats, and allocate resources to minimize risk and ensure compliance.
- Organizations have limited IT resources, lack of internal security expertise, struggle to hire security talent, and lack of budget.

KEDAYAM : A KAAPAGAM MANAGED SECURITY SERVICES : OVERVIEW

For organizations challenged with meeting IT budget constraints, fighting growing threat adversaries, increased reliance on an already over-burdened IT staff or looking for more efficiency around your compliance and security initiatives, We at Kaapagam understand that all businesses are different and thus the threat vectors can also be different, and that's why our **Kaapagam Managed Security Services, KEDAYAM is designed with flexibility to understand your security challenges and close that Gap with integrated technologies, threat intelligence and highly capable information security professionals with vast experience in myriad of industry domains.**

By gaining a detailed understanding of individual client needs, we deliver flexible managed security services that work the way clients want; enhancing their existing security program, infrastructure and personnel while relieving the information security and compliance burden and the Capex.

If you are challenged with Staff & Budget constraints, you may be looking for ways to operationalize your security investments and keep your focus on your business priorities. With our Kaapagam Managed Security Services, KEDAYAM, we package solution bundles, automated tools, and expert security team to remove your day-to-day security woes.

If you have an existing Security Team and need upgrades in Processes, People, and Technology, we will design a customized Managed Security Services bundle that will address your requirements and drive towards achieving your specific security goal.

Before the implementation phase of our Managed Services, Our Kaapagam engineers actively work with clients to understand their infrastructure and requirements. Services are then implemented, configured, tuned, and maintained to achieve client goals and work with the client's existing security program, infrastructure and personnel. The Kaapagam team acts as an extension of the client's internal Security / IT team, delivering security expertise and around-the-clock monitoring
